Re: Chicago Suburban System-Well Sites

Dear Ms. Davis:

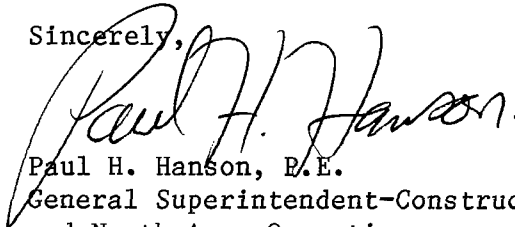

In response to your letter of July 18, 1988, I am enclosing a system map with highlighted well locations and original well drilling logs of our wells in the Chicago Suburban system.

As general operating procedure, Wells #1, #2 and #4 are utilized on a daily basis. Well #5 is a standby well which is used during peak demand times. Well #6 is strictly standby for emergency purposes only. The mixing or blending of water would only be as it occurs between the wells supplies in the system. There is no special mixing process or program.

Our Chicago Suburban system contains approximately 7200 connections, serving a population of 25,000. The system is primarily residential, with some commercial and light industrial users.

If you should require additional information or details, please contact the writer. I would appreciate receiving a copy of the result of your survey if this is possible.

Sincerely,

Paul H. Hanson, E.E.
